

TOPIC 3	
Title:	Performance comparison of an AVL tree and B-tree
Tasks:	<ul style="list-style-type: none"> <li>• Implement an AVL tree and B-tree with varying m-values             <ul style="list-style-type: none"> <li>◦ Including the capability to visualize at all steps</li> <li>◦ Provide a link to the implementation's public Github repository</li> <li>◦ Provide instructions to run the code in the README.md file                     <ul style="list-style-type: none"> <li>▪ If the code is Python, use virtual environments</li> <li>▪ If in another language, use docker</li> </ul> </li> <li>◦ Provide the datasets in the repository</li> </ul> </li> <li>• Run experiments to show the difference in time and memory complexity             <ul style="list-style-type: none"> <li>◦ Scenarios include search, insert, and delete</li> <li>◦ Experiments must be run over incremental dataset sizes</li> <li>◦ Integer types are enough</li> </ul> </li> <li>• Show performance graphs and discuss the experiments' results             <ul style="list-style-type: none"> <li>◦ Note if the results are expected</li> <li>◦ If the results diverge from expectations, explain the reason</li> </ul> </li> </ul>
Seminar structure:	<p>The seminar must have at least 3000 words or between 6 and 8 pages including figures. The seminar text should be single-spaced.</p> <p>The seminar must at least have the following sections:</p> <ol style="list-style-type: none"> <li>1. Introduction</li> <li>2. Algorithm presentation</li> <li>3. Experiment setup</li> <li>4. Experiment results</li> <li>5. Discussion and conclusion</li> </ol>
Note:	<p>Use benchmarking tools to gather your results, such as Python profilers <a href="https://docs.python.org/3/library/profile.html">https://docs.python.org/3/library/profile.html</a>, gperf, or valgrind.</p> <p>Be sure to use a sequential memory data structure for arrays. Python lists are not adequate for this, but you can use arrays <a href="https://docs.python.org/3/library/array.html">https://docs.python.org/3/library/array.html</a> or NumPy arrays.</p> <p>For visualization we suggest using GraphViz.</p> <p>Experiments <b>MUST</b> be reproducible.</p>
